

HD-900

EXCEED

Bucket capacity

• CECE heaped : 0.5m³~1.30m³

• PCSA, SAE heaped : 0.75yd³~1.90yd³

Engine output : 155 PS/2,200 rpm (JIS, DIN)

153 HP (114kW)/2,200 rpm (SAE, Net)

Gross weight

: 22,500kg (49,600lbs) HD-900V_{II}

23,200kg (51,150lbs) HD-900V_{II}-LC

V_{II} series

KATO

The widely acclaimed advanced excavator with

EXCEED

extensive improvements to satisfy your expectation

Comfortable king size cab brighten up operating

• Tinted safety glass

• Crossbar eliminated for wide forward visibility

• Flat floor making access and cleaning easy

• One key system

• Safety monitor ensures safety

environment

• King-size cab meets ISO international standard (940 mm)

• Long lever available

• Sturdy frame-structure prevents the engine cover from the damage

• Large tool box

State-of-the-art technology feel the all advantages

New "APC" computer system enables use of full engine power

■ An advanced new computer system developed by Kato, New "APC", controls pump output in line with work conditions and site demands. Engine and pump output are matched at optimum level in a ground-breaking system that exploits 100% of engine power.

Economical "Auto Slow" system saves fuel consumption while waiting to dump

■ A few seconds after the lever is put into neutral, the fuel-saving "Auto Slow" system automatically drops the engine speed down to an idle. This reduces power loss while waiting to dump, thus cutting fuel waste and further improving overall economy. Noise is reduced, too. Auto Slow has three modes: On, Off and Econo mode

· **On mode:** Engine speed is automatically reduced; most effective when waiting to dump, etc.

· **Off mode:** Use the quick accelerator switch to drop speed to idle and then to restore its previous speed.

· **Econo mode:** Engine speed is set at the most efficient production/fuel consumption. The quick accelerator switch slows down to idle and restores the Econo speed as in Off mode.

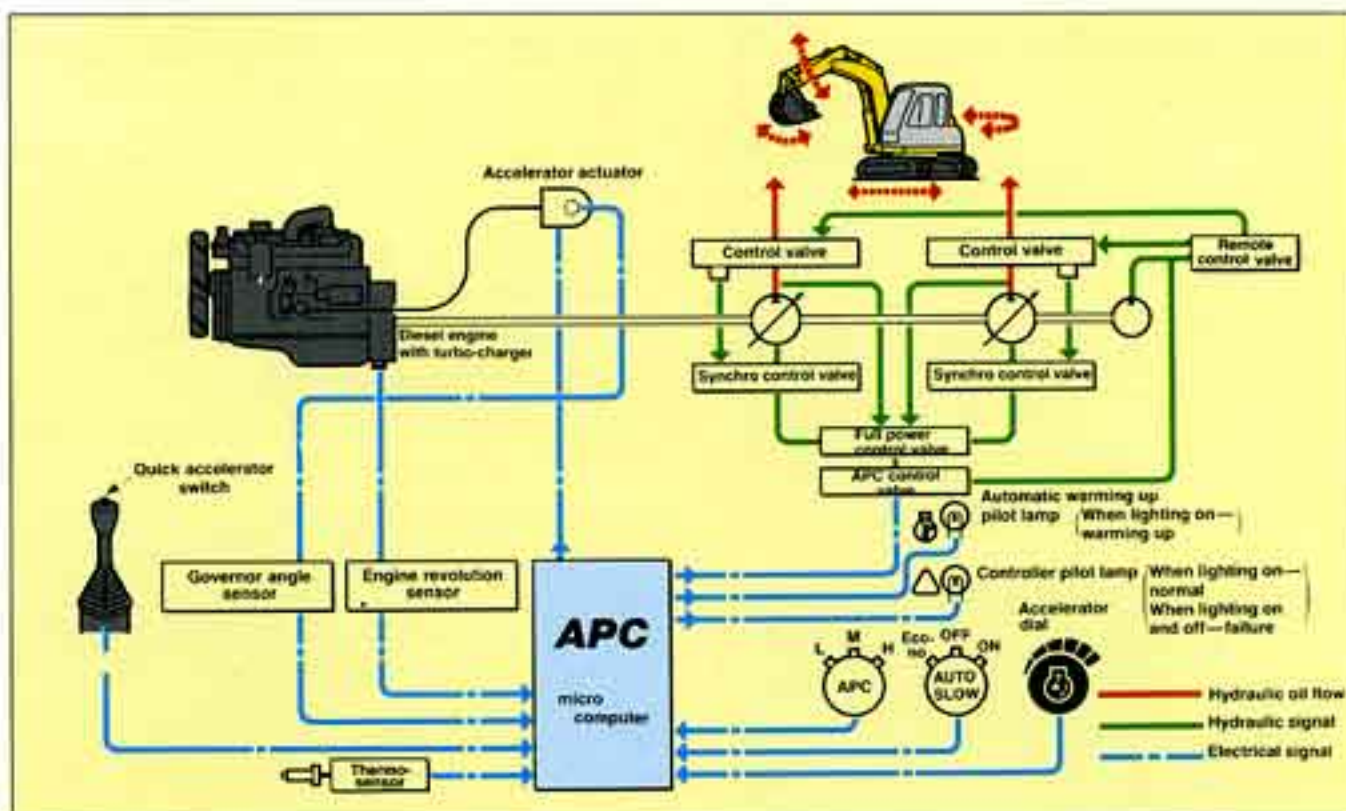

Six modes let you balance work load with fuel consumption and noise level

■ Changing the "APC" mode (H mode, M mode, L mode) lets the operator automatically control the load ratio on the engine. Econo mode additionally allows the engine speed to be reduced, further lowering fuel consumption and noise by another large step.

Two-speed travel motor and travel boost system push this machine to the head of its class (5.5kmh/3.4mph)

■ Two-speed travel motor and travel boost system give this machine the highest speed and traction force in its class. Operator can easily select the right travel speed to suit the requirements of the job.

Choose from big-job, fuel-efficiency and small-job modes

■ Choose from any one of three modes of "APC" control depending on the requirements of the job. Select the H mode (which makes maximum use of engine power), the M mode (which changes engine power without reducing engine rpm) or the L mode.

H mode (for greatest productivity): Ideal for jobs that involve lots of digging and earthmoving—enables you to get the work done faster for maximum productivity.

M mode (saves fuel): Greatly reduces fuel while keeping high productivity.

L mode (for precise operation): Optimum for precise jobs like grading, leveling and lifting at minimum fuel consumption.

- **H mode** for greatest productivity
- **M mode** for less fuel consumption
- **L mode** for precise operation

H mode for greatest productivity

M mode for less fuel consumption

L mode for precise operation

High speed traveling long distance traveling

Low speed traveling traveling on site, climbing up steep slopes or getting out of marshy land

Wide operating range

■ Digs deeper, higher and wider than any machine in its class. This machine has a maximum digging depth of 6.92m (22'08"), a maximum digging radius of 10.35m (33'11"), a maximum vertical digging depth of 6.13m (20'01"), and a maximum digging height of 9.91m (32'06").

Greatest digging force

■ Digging force is tops in its class: bucket digging force is 13.2t (29,100lbf) and arm digging force 10.7t (23,600lbf). This exceptional force makes the machine fast and effective even on tough digging jobs like clay and hard dirt.

Smooth fine control

■ Cushioning mechanism absorbs shocks in the arm cylinder and boom cylinder. The proved swing mechanism ensures the smooth swing without jerks.

Synchro control system reduces energy waste

■ When the operating lever is in neutral, the pump flow rate is automatically set to a minimum to save fuel and the supply rate is matched to lever stroke. So loss through restriction and discharge from the control valve during inching operations or when in neutral position have been reduced.

Straight travel system while compound operation

■ The machine can travel straight even while the compound operation of boom, arm, bucket and swing.

High-power, low-fuel-consumption and low-noise direct-injection turbo-charged engine

■ Tenacious and reliable, the direct-injection turbo-charged engine is just the start of a thoughtful noise-reducing, fuel-efficient and high-power design. Combined with the New "APC", it creates the great productivity and low fuel costs.

Innovative "Accel Dial" for engine speed control

■ Engine speed is controlled by finger-touch "Accel Dial" thanks to an electric servomotor. Combination with "Auto Slow" makes the engine control more advanced.

Light-touch lever-control

■ Light touch servo control levers are employed for ease of operation. Both a wrist control lever and a long lever are available.

Roomy wide cab for enhanced operator's comfort

■ A roomy wide cab features an ISO standard width of 940mm (3'1"). The tinted safety glass, all controls and instruments are ergonomically designed for optimum comfort. The fully reclining bucket type seat with forward/backward, vertical and recline angle adjustment is designed so that the operator will experience a minimum of fatigue, even when working long hours.

■ The cab structure is rubber-mounted on six positions. The compressed sound-proofing materials are also installed in the cab to isolate engine and other outside noise and vibration from the cab for the operator's comfort.

Low noise design

■ A number of features have been incorporated to reduce noise, among them the quiet turbo-charged engine, a muffled engine room with a bottom cover, and plenty of sound-absorbing material applied to the engine cover for the low noise inside the cab and in the environment.

Check machine condition at a glance

■ A safety monitor is provided for inspection prior to commencing work so that the operator can check the condition of the machine at a glance from the comfort of his seat. In the event of a fault, a red lamp lights and a buzzer sounds to warn the operator.

New design makes maintenance simple

- Tool box is large enough to accommodate tools, a grease can and etc, and the large fuel tank cuts down frequency of refuelling.
- The superstructure is provided with hand-rails and non-slip tapes for safety and easy access during inspections and maintenance.
- Just one key to start the engine as well as locking the cab, machine room and all other locations.
- Radiator net prevents from clogging and easy to slide upwards for easy maintenance.

Sturdy frame-structure prevents the engine cover from the damage

- The skirt of the superstructure is so designed, in the rounded, sturdy frame-structure, as to protect the engine cover from accidental contact and shocks.

Superstructure-undercover eases travel and work in rough terrain

- The superstructure is provided with the undercover for easy travel and work in rough terrain.

Handy centralized lubrication system

- A remote lubrication system makes greasing of high area safe and easy.
- Dust seals and o-rings provided for the front attachment and bucket extend pin life and improve durability.

Bucket clearance is easy to adjust

- To adjust bucket clatter simply loosen the fitting bolts, remove the flange, add shims to the loose area and then re-tighten to eliminate the clatter.

Swing motor with parking brake ensures safety

- Swing mechanical parking brake which prevents free swinging when traveling and on inclines.

Safety lock lever

- Safety lock lever prevents accidental misoperation when getting in and out of the cab.

Sturdy, stable undercarriage

- The travel motor is neatly housed inside the track frame with a cover. Sufficient ground clearance assisted by a traveling pipings cover and mud clogging prevention hole located underneath the carrier roller, ensures powerful travel without any fear of the damage even on ungraded land.

Technical Specifications

ENGINE

Model	Mitsubishi 6D15-T, 4 cycle turbo charged diesel engine
Number of cylinders.....	6
Bore & Stroke.....	113mm (4.4")×115mm (4.5")
Total displacement	6,919cc (422 cu. in.)
Rated output	155PS (114kW)/2,200rpm (JIS, D1005-1986, DIN 6270B) 153HP (114kW)/2,200rpm (SAE J1349, Net)
Max. torque	58kgf·m/1,600rpm 420lb·ft/1,600rpm
Compression ratio	16.0 : 1
Combustion system	Direct injection
Specific fuel consumption	178g/PS-hour 0.392lb/HP-hour, 242g/kW-hour
Cooling system.....	Pressurized water circulated by a centrifugal pump with thermostat
Lubrication system	Pressurized oil fed by a gear pump through full-flow and by-pass cartridge filters.
Starter	Electric, 24V-4.5kW
Generator.....	Alternator, 24V-30A
Governor.....	Mechanical
Air cleaner	Dry type filter

TRAVEL SYSTEM

Spring-applied idlers protect the drives from shock. Adjust cylinder is provided for easy arrangement of the track tensioning. An all welded undercarriage frame gives clog-free clearance, and the drive motors are neatly housed inside the track frame. The crawler tracks with interchangeable shoes are supported by 8 lower rollers (9 lower rollers for HD-900V _{II} -LC), 2 upper rollers and a guard plate on each side.	
Traveling motors.....	Independent axial piston motors with reduction for each side
Brakes	Independent disk parking brake for each side, applied automatically when the travel levers are in the neutral position.
Track shoes.....	51 each side HD-900V _{II} 55 each side HD-900V _{II} -LC
Track adjustment.....	Grease cylinders with recoil springs
Lubrication	Sealed-for-life rollers and front idlers with floating seals
Travel speed.....	High 0~5.5km/h (0~3.4mph) HD-900V _{II} 0~5.4km/h (0~3.4mph) HD-900V _{II} -LC Low 0~4.0km/h (0~2.5mph)
Gradeability.....	70% (35°)
Max. drawbar pull	18,500kgf (41,000lbf)
Ground clearance (less grouser bar)	480mm (1'07")
Track length.....	4240mm (13'11") HD-900V _{II} 4590mm (15'01") HD-900V _{II} -LC

HYDRAULIC SYSTEM

Two pumps are controlled by the Kato developed "APC" (Automatic Power Control) system, which senses where power is needed and automatically adjusts the pressure and flow-rate of the pump to match the work load. New "APC" system enables pump output to be utilized to the full with minimum fuel consumption. The adoption of joint circuit enables dual speed for boom derricking and arm extension/retraction.	
Pumps	Double variable piston pump and gear pump
Max. discharge flow	2×253 lit./min. 2×66.8 US gal./min.
Max. discharge pressure	285kgf/cm ² (4,050 psi)
Max. discharge pressure (travel circuit only)	335kgf/cm ² (4,760 psi)
Oil filtration	One full-flow filter with replaceable element, a drain cartridge filter, a pilot line filter and a suction strainer
Control valves	5+4 section multiple control valves
Pilot pump	Gear type
Oil cooler.....	Finned tube, forced ventilation
Pressure relief valves.....	Primary and secondary on each circuit

CAB & CONTROLS

The all-weather sound suppressed, 940mm (3'01") wide pressed steel cab is rubber mounted and has plenty of leg room. All windows are made of tinted safety glass. The front windscreen can be raised and slide back so that it fits flush with the ceiling to provide improved visibility and ventilation. The cloth-covered, fully adjustable seat is provided. Operating conditions can be seen at a glance on Safety Monitor.	
Right hand lever	Controls the boom & bucket
Inner right hand lever (with foot pedal)	Controls the right hand track
Inner left hand lever (with foot pedal)	Controls the left hand track
Left hand lever.....	Controls the arm & swing
Pilot control	Boom, arm, bucket and swing
Engine throttle	Electric "Accel dial"
Safety monitor	Hour meter, water temperature and fuel level
Pilot lamps	Engine oil pressure, engine oil filter, hydraulic oil filter, hydraulic oil temperature, water temperature, water level, fuel level, battery charge and air cleaner
Standard cab accessories.....	Front screen wiper, adjustable reclining seat, cigarette lighter, ashtray, coat hook, floor mat, horn, internal light and storage compartment

Working lights Provided on the boom side and mounted on the frame
 Lubrication chart Inside the cab
 Tools..... Standard maintenance tools

SWING SYSTEM

The hydraulic gear-driven swing is powered by piston motor that is flange-connected to a planetary reduction unit. It rotates 360° continuously on the single row-ball bearing that has an integral, internally cut swing gear, and is totally enclosed to prevent the ingress of mud and water.

Brake A hydraulic brake that locks automatically when the swing control lever is in the neutral position and a mechanical parking brake operated by either pulling the safety lock lever backwards or engine stop.

Lubrication..... Completely housed and greased bathed
 Max. swing speed 12.4rpm
 Tail swing radius 3,140mm (10'04")
 Min. front swing radius 4,070mm (13'04")

BOOM, ARM AND BUCKET

The boom and arm are of all-welded, steel box section type with reinforced pin joints. Bucket is fabricated from high tensile strength steel and use taper located teeth. Boom cylinders..... Two, double acting
 Bore & Stroke..... 140mm (5.5")×1,370mm (53.9")

Arm cylinder..... One, double acting
 Bore & Stroke..... 150mm (5.9")×1,680mm (66.1")
 Bucket cylinder One, double acting
 Bore & Stroke..... 130mm (5.1")×1,155mm (45.5")
 Lubrication..... Grease nipples, with centralized greasing for remote points
 Bucket digging force 13,200kgf (29,100lbf)
 Arm digging force..... 10,700kgf (23,600lbf)

REFILLING CAPACITY

Fuel tank 320 lit. (84.5 US gal.)
 Cooling system..... 25 lit. (6.6 US gal.)
 Engine oil 20 lit. (5.3 US gal.)
 Track drives 2×3.3 lit. (2×0.9 US gal.)
 Swing drive..... 11 lit. (2.9 US gal.)
 Hydraulic oil tank
 (level) 165 lit. (44 US gal.)
 (system)..... 290 lit. (77 US gal.)

WEIGHT

In standard figure, with the 2.87m (9'05") arm, 600mm (24") grouser shoes and 0.9m³ CECE heaped (1.36 cu. yd. SAE heaped) bucket.
 Operating 22,500kg (49,600lb) HD-900V_{II}
 weight 23,200kg (51,150lb) HD-900V_{II}-LC
 Ground 0.50kgf/cm² (7.11psi) HD-900V_{II}
 pressure 0.48kgf/cm² (6.83psi) HD-900V_{II}-LC

- NOTE:
- 1) Lifting capacities are based on SAE J1097.
 - 2) Lifting capacities shown do not exceed 87% of machine hydraulic capacity or 75% of minimum tipping load.
 - 3) Capacities marked with an asterisk(*) are limited by hydraulic capacities.
 - 4) Lifting capacities are based on machine standing on firm, uniform supporting surface.
User must make allowances for job conditions such as soft or uneven ground.
 - 5) Lifting capacities shown should not be exceeded. Weight of all lifting accessories must be deducted from the above lifting capacities.
 - 6) Capacities apply only to the machine as originally manufactured and equipped by KATO WORKS CO., LTD.
